Chair: Prof Benjamin Tejerina, University of the Basque Country

The Contentious Politics of Climate Change. Old and New Cleavage in Environmental Struggles

Climate change has been a central concern for environmental movements, not only with alliances but also cleavages developing at local, national and transnational levels. In the transnational campaigns, activists from the global South have challenged some main mainstream environmentalist strategies as tamed and claimed them as north-centred. Concepts, like climate justice and environmentalism/ecology of the poors, have been used to point at global alternatives. Also, at local and national level, various forms of contention have developed, often from the recognition of emerging challenges.

At the cross-road of various intersecting crises (financial and health crises), Green Deal policies have cleaved the environmental movement between supporters of the green mainstream and critics of the greenwashing.

Recent processual developments in the analysis of contentious politics will be referred to understand these new cleavages. Illustrations from my ongoing research will be presented to single out success and failures in the building of alliances for the environment.

9:30 AM

Mitxelena Conf. Room

Plenary Session 2

Dr Mario Blaser, Memorial University of Newfoundland, Terranova-St John's, Canada

Chair: Prof Benjamin Tejerina, University of the Basque Country

For Emplacement: Life Projects Beyond Re-embedding

The sociological imagination of the 1990s described globalization as modernization writ large, an inexorable process of disembedding life from the particularities of and ties to place, and of increasing dependence on "abstract systems" spread across time and space.

Today, globalization is being questioned, and we are told daily that the world is facing its consequences in the form of a crisis of planetary proportions. In the face of this, we are beginning to see the emergence of various calls to re-embed our lives in our places. In this talk, I will share some ideas from my forthcoming book, in which I invite readers to adopt a standpoint, informed by the experiences of what I call emplaced collectives (often simplistically labelled as indigenous communities), from which to evaluate these calls and to explore what it might take to become emplaced. This concept resonates with, but is not the same as, embedded, and in fact foregrounds some Gordian knots that are not necessarily within the purview of calls for re-embedding.

I will discuss how the concept has taken shape, how it helps illuminate perhaps little-noticed complexities of the so-called planetary crisis, and offer a way to respond to them through what I call life projects.

Chair: Dr Susana Carro-Ripalda, UPV/EHU- External Collaborator Doctorate School

Material Sustainabilities: Rethinking Sustainability from Below

In this talk, I consider how the world of vegetation undergirds, makes possible and, indeed, sustains the thinking and the practices of sustainability. I argue that plants possess intrinsic value, irreducible to the instrumental rationality that often dovetails with discourses of sustainability. The meaning of the intrinsic value of plants lies not so much in what they are in themselves as in what they are for themselves, at the limits of human understanding. I then suggest that this vegetal perspective on the world, which puts into question the anthropocentric idea of truth, may join a cross-species and cross-kingdoms "community of values" with human environmental practices that would treat other living beings not as objects of concern but as partners in sustainable living.

Plenary Session 4

Dr Paula Bruna, Ecological and Forestry Applications Research Centre CREAL-UAB

Chair: Dr Susana Carro-Ripalda, UPV/EHU- External Collaborator Doctorate School

The Plantocene: Exploring an Ecocentric View through Art and Fiction

For over fifty years, we've known that our way of living leads to global ecological crises such as climate change, biodiversity loss, resource depletion, and pollution (Meadows et al., 1972). Despite this knowledge, the situation continues to worsen, pushing us toward dangerous limits for societal sustainability (Steffen et al., 2015). Why haven't we changed course?

Many authors suggest that our limitations lie in the way we perceive ourselves in relation to the world (Guattari, 2000; Haraway, 2016; Morton, 2016). To address this, we need to dismantle anthropocentrism and shift toward a broader worldview that allows us to explore new ways of ecological coexistence. Embracing non-human subjectivities, which offer different perspectives of reality, can be a powerful act in a society facing multiple crises.

But how can we approach non-human subjectivities given our human condition? To bridge this gap, I use a combination of scientific knowledge, speculative fiction, and artistic practice. This combination enables us to experience realities beyond the human perspective, providing significant potential to overcome prevailing anthropocentrism and to propose new ways of (co)existing (Bruna, 2019).

To challenge the human-centric focus of the Anthropocene, I introduced the concept of the Plantocene (Bruna, 2021), a fictional yet plausible geological era led by plants. Considering, for instance, the effects of photosynthesis on the atmosphere's composition, if we discuss the Anthropocene, why not a Plantocene? Furthermore, humans utterly depend on plants. Thus, the Plantocene challenges human dominance and offers a new lens through which everything appears differently.

Using the Plantocene as a framework, I develop my artistic practice. My projects aim to understand the environment and ecological conflicts from other "points of life" (Coccia, 2017). I consider this approach of learning alongside other species a political act toward ecocentric perspectives and a poetic response against the isolation imposed by consumerist capitalism.

Plenary Session 5

Dr Paola Mercogliano, Agora European Project; University of Naples;
Italian Climatology Society

Chair: Dr Camilo Tamayo Gómez, University of Huddersfield

Agora. Advancing Societal Transformation for Climate Adaptation through Co-creation, Mutual Learning and Support to Local Communities

AGORA is a HORIZON Europe project (Grant agreement ID: 101093921) which started in January 2023 and will have a total duration of 3 years. This initiative supports the EU Mission on Adaptation to Climate Change through four main pillars. First, it will carry out four Pilots to create workshops and implement co-creation, co-design and co-implementation strategies in different countries: Spain (Zaragoza), Italy (Rome), Sweden (Malmö) and Germany (Dresden). Second, understanding stakeholders' needs and the climate change risks in each framework will make it possible to create better strategies. In addition, the project gathers interest from cross-disciplinary stakeholders who take the lessons learned and evaluate how to implement them in a different context. They are considered "followers"; currently, there are over 50 stakeholders in non-Pilot countries, such as Portugal. Third, AGORA promotes societal transformation to empower local communities, and to do so, it evaluates the need for learning tools to be developed. It will host workshops tackling pressing issues, such as disinformation, while creating digital tools where citizens can obtain valuable knowledge. These will include a Digital Agora, two digital Academies, and an app, which will be a challenging game that will allow stakeholders to be entertained and learn simultaneously. Finally, the project evaluates policies implemented in different countries to address climate change risks and design adaptation strategies through participatory democratic methodologies. Through a multidisciplinary, integrated approach, AGORA is a growing, dynamic, pan-European community that creates and shares advanced digital tools to enhance awareness. Informed citizens can actively participate and contribute to ensure safe and sustainable development. Hence, the project is the meeting point where citizens share knowledge, practices, expertise and needs, interacting with sciences to design and build a more resilient Europe through a living dialogue between local communities.

9:45 AM

Plenary Session 6

Rebecca Elliot, London School of Economics; Grantham Research Institute on Climate Change and the Environment; LSE Phelan United States Centre

Chair: Dr Camilo Tamayo Gómez, University of Huddersfield

Loss, Letting Go, and the Social Life of Climate Change

Climate change involves human societies in problems of loss: depletion, disappearance, and collapse. The climate changes and changes other things, in specifically destructive ways. The talk offers a framework for reckoning analytically with the effects of climate change through the lens of loss: losses that can be compensated and those that cannot, losses that are resisted, mourned, or even desired. I will illustrate the intersections between loss and questions about value, limits, and memory, across different sites and cases: from flood insurance in the United States to heritage preservation in the United Kingdom. The talk will further contextualize this project in broader interdisciplinary moves towards developing understandings of "the social life of climate change."
